Application Number: 10/597,295 Page 1 of 4

Art Unit: 3662

1. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

- 2. The abstract is not in compliance with 37 CFR 1.72(b) and MPEP §608.01(b). The abstract should be a single paragraph of 150 words or less commencing on a separate sheet following the claims.
- 3. The disclosure is objected to because of the following informalities: in paragraph [9], line 3, the term "outputed" appears to be misspelled.
- 4. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.
- 5. Claims 2 and 11 are objected to because of the following informalities: in claim 2, line 11, the term "of" does not appear to be necessary; and in claim 11, line 14, the term "of" does not appear to be necessary.

  Appropriate correction is required.
- 6. Claim 8 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 8 recites the limitation "The method" in line 1.

There is insufficient antecedent basis for this limitation in the claim.

- 7. With respect to claims 5 and 7, a claim limitation will be presumed to invoke 35 U.S.C.
- 112, sixth paragraph, if it meets the following 3-prong analysis:
- (A) the claim limitations must use the phrase "means for" or "step for; "
- (B) the "means for" or "step for" must be modified by functional language; and
- (C) the phrase "means for" or "step for" must not be modified by sufficient structure, material, or acts for achieving the specified function.

In the instant case:

Application Number: 10/597,295 Page 2 of 4

Art Unit: 3662

Claim 5, line 4, recites "means for transmitting", which is not defined in the claim and does not appear to be defined in the specification by sufficient structure, thus claim 5 is considered indefinite.

Claim 5, line 14, recites "a processing unit for", which is not defined in the claim and does not appear to be defined in the specification by sufficient structure, thus claim 5 is considered indefinite.

Claim 7, line 2, recites "means for monitoring", which is not defined in the claim and does not appear to be defined in the specification by sufficient structure, thus claim 7 is considered indefinite.

Claim 7, line 3, recites "means for determining", which is not defined in the claim and does not appear to be defined in the specification by sufficient structure, thus claim 7 is considered indefinite.

Claim 7, line 5, recites "means for converting", which is not defined in the claim and does not appear to be defined in the specification by sufficient structure, thus claim 7 is considered indefinite.

- 8. The following is a quotation of 35 U.S.C. 101 that reads as follows:

  Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.
- 9. Claims 1-3 and 8-12 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The aforementioned method claims fail to meet the following requirements because they are not tied to another statutory class of invention or transform underlying subject matter (such as an article or materials) to a different state or thing. Based on Supreme Court precedent, a method/process claim must (1) be tied to another statutory class of invention (such as a particular apparatus) (see at least Diamond v. Diehr, 450 U.S. 175,

Application Number: 10/597,295 Page 3 of 4

Art Unit: 3662

184 (1981); Parker v. Flook, 437 U.S. 584,588 n.9 (1978); Gottschalk v. Benson, 409 U.S. 63, 70 (1972); Cochrane v. Deener, 94 U.S. 780, 787-88 (1876)) or (2) transform underlying subject

matter (such as an article or materials) to a different state or thing (see at least Gottschalk v.

Benson, 409 U.S. 63, 71 (1972)).

ineligible claim into an eligible one.

A method/process claim that fails to meet one of the above requirements is not in compliance with the statutory requirements of 35 U.S.C. 101 for patent eligible subject matter. Nominal recitations of structure in an otherwise ineligible method fail to make the method a statutory process. See Benson, 409 U.S. at 71-72. As Comiskey recognized, "the mere use of the machine to collect data necessary for application of the mental process may not make the claim patentable subject matter." Comiskey, 499 F.3d at 1380 (citing In re Grams, 888 F.2d 835, 839-40 (Fed. Cir.1989)). Incidental physical limitations, such as data gathering, field of use limitations, and post-solution activity are not enough to convert an abstract idea into a statutory process. In other words, nominal or token recitations of structure in a method claim do not convert an otherwise

10. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 11. Claims 1 and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by US4644513. The US4644513 reference discloses an ultrasonic distance measuring device (see column 1, lines 5-10), including:

an ultrasonic sensor (12);

an amplifier (21);

Application Number: 10/597,295 Page 4 of 4

Art Unit: 3662

a low pass filter (28 & 29);

a threshold detector (40) that generates an out put when a predetermined voltage level condition

is reached; and

calculating the distance based on the period (duration) of the received signal utilizing missing

pulse counter (45) meeting the features of claim 1.

With regards to claim 5, the US4644513 reference discloses a means (10) for transmitting a

synchronized signal in a cable.

Any inquiry concerning this communication or earlier communications from the 12.

examiner should be directed to Dan Pihulic whose telephone number is 571-272-6977. The

examiner can normally be reached on Tuesday through Thursday and every other Monday and

Friday from 5:30 a.m. to 4 p.m. If attempts to reach the examiner by telephone are unsuccessful,

the examiner's supervisor, Thomas Tarcza, can be reached on 571-272-6979.

The fax phone numbers for the organization where this application or proceeding is assigned are:

571-273-8300 for official responses, and

571-273-6977 for unofficial communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should

be directed to the telephone number 800-786-9199.

Information regarding the status of an application may be obtained from the Patent Application

Information Retrieval (PAIR) system. Status information for published applications may be

obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197.

/Dan Pihulic/ Primary Examiner, Art Unit 3662
